SECTION I: INTRODUCTION

We were asked to determine the costs associated with alternate service retirement benefits, as follows:

- Scenario A: Adopting Section 31676.14 for General members, and
- Scenario B: Adopting 2.5% @ 55 for General members and 2.5% @ 50 for Safety members.

Section 31627 would be adopted to provide for a supplemental annuity to pay the difference between Section 31676.14 and 2.5% @ 55 for General members, and the difference between Section 31664 and 2.5% @ 50 for Safety members.

It is our understanding that these proposed new formulas will apply to both past and future service. We also understand that both current active and inactive members will be eligible for these benefit improvements. All of the costs shown herein assume that the employer pays all past costs associated with these improvements.

Our study is based upon the following data used to perform the June 30, 1998 actuarial valuation of the Association:

SUMMARY OF ACTIVE AND INACTIVE/VESTED MEMBERSHIP			
	GENERAL	SAFETY	TOTAL
Actives			
Number	5,200	857	6,057

Inactive Vested			
Number	1,378	104	1,482

* Represents the annualized active members' pay rates on June 30, 1998.

A summary of the results of our study is presented in the next section. These results are based upon the current actuarial assumptions, which are summarized in the Appendix of this report.

SECTION II: SUMMARY OF RESULTS

Currently, service retirement benefits are calculated in accordance with Section 31676.12 for General members and Section 31664 for Safety members. These sections provide a benefit of 2% of final average salary at age 57 for General members and at age 50 for Safety members. The proposed formula will provide 2.5% of final average salary at age 55 for General members and 2.5% at age 50 for Safety members. The costs associated with the 2.5% retirement benefits will be implemented by first adopting Section 31676.14 for General members. The difference between Section 31676.14 and 2.5% @ 55 for General members, and the difference between Section 31664 and 2.5% @ 50 for Safety members will be paid out as a supplemental benefit under Section 31627.

The total costs for each benefit formula are shown under the following scenarios:

- Scenario A: Section 31676.14 for General members, and
- Scenario B: 2.5% @ 55 for General members and 2.5% @ 50 for Safety members.

The benefit adjustment factors used above and below the normal retirement age for the 2.5% @ 55 formula for General members are the same as those currently used under Section 31676.12, except that these factors were shifted up by two ages. For Safety members, the 2.5% @ 50 benefit adjustment factors are exactly the same as the factors currently used for Section 31664.

Below we show sample benefit percentages for the General and Safety groups.

AGE	SAMPLE BENEFIT PERCENTAGES				
	GENERAL		SAFETY		
	Current	Scenario A 31676.14	Scenario B (2.5% @ 55)	Current	Scenario B (2.5% @ 50)
41				1.25%	1.56%
45				1.56%	1.95%
50	1.34%	1.48%	1.86%	2.00%	2.50%
55	1.77%	1.95%	2.50%	2.62%	3.27%
57	2.00%	2.18%	2.76%	2.62%	3.27%
60	2.34%	2.44%	3.27%	2.62%	3.27%
62 & Over	2.62%	2.62%	3.27%	2.62%	3.27%

MEMBER CONTRIBUTION RATES

Currently, Sections 31621.5 and 31639.5 set forth the basis for the determination of the employee contributions for General and Safety members, respectively. As a result of the proposed plan improvements, we have derived new basic half rates. The new member rates reflect changes in both the benefit formula and the normal retirement age for General members.

The employee portion of the cost-of-living contributions are expressed as a percentage of the employees' basic contribution rates. The same cost-of-living percentage is used for General and Safety members. The current cost-of-living percentage, before transfers, is 55.45%. This percentage will increase to 59.13% for Section 31676.14 General formula. For the 2.5% @ 55 General formula and the 2.5% @ 50 Safety formula, the COLA percentage decreases to 51.19%.

A summary of the average basic and cost-of-living employee contribution rates based on the current and proposed plan provisions is provided below. Rates at sample ages are shown on the following page.

AVERAGE MEMBER BASIC AND COST OF LIVING CONTRIBUTION RATES – Before Transfers		
	General	Safety
Current Rates	4.82%	5.75%
General 31676.14 (Scenario A)	4.72%	5.88%
General 2.5% @ 55 and Safety 2.5% @ 50 Rates (Scenario B)	6.72%	6.98%

Under Scenario A, the average employee contribution rate decreases slightly for General members and increases for Safety members. The decrease reflects the basic contribution rate formula prescribed for Section 31676.14 and set in Section 31621.3 of the 1937 Act. The increase in the Safety member rates reflects the higher COLA percentage, which is shared by both groups.

Because the rates under Scenario A change by less than 5%, we recommend that they remain unchanged until the next actuarial valuation study due to be completed later this year.

SAMPLE GENERAL MEMBER CONTRIBUTION RATES*			
Before Transfers			
Entry Age	Current	Scenario A	Scenario B
25	4.57%	4.49%	6.40%
35	5.27%	5.14%	7.33%
54	6.98%	6.79%	9.68%

* These are half rates payable by the member. Contribution rates for the first \$350.00 of monthly salary are one-third lower for members covered by Social Security.

SAMPLE SAFETY MEMBER CONTRIBUTION RATES*			
Before Transfers			
Entry Age	Current	Scenario A**	Scenario B
25	5.81%	5.95%	7.08%
35	6.64%	6.79%	8.07%
49	8.11%	8.31%	9.87%

* These are half rates payable by the member. Contribution rates for the first \$350.00 of monthly salary are one-third lower for members covered by Social Security.

** Scenario A only changes the basic benefit formula for General members only. However, this change will affect the cost of living percentage for Safety members due to the sharing of COLA.

Scenario A: Section 31676.14 for General members.

Scenario B: 2.5% @ 55 for General members and 2.5% @ 50 for Safety members.

Schedule 3 in the Appendix contains the complete set of basic and cost-of-living contribution rates. The interest rate, mortality table, inflation rate, and cost-of-living benefit are indicated on the bottom of the schedules.

EMPLOYER CONTRIBUTION RATES

On the following page, we show a comparison between the current employer contribution rates resulting from the June 30, 1998 valuation and the rates calculated under the alternate service retirement benefits. Please note that these rates do not reflect the balance of any transfers. The current balance is equivalent to 6.36% of total payroll.

EMPLOYER CONTRIBUTIONS						
	TOTAL RATES		ADDITIONAL RATES		ADDITIONAL ANNUAL AMOUNT*	
	GENERAL	SAFETY	GENERAL	SAFETY		
Current Rates

Total Employer Rate	22.96%	29.81%	8.80%	9.62%	\$19,615,000	

*Based on the June 30, 1998 payroll.

Scenario A: Section 31676.14 for General members.

Scenario B: 2.5% @ 55 for General members and 2.5% @ 50 for Safety members.

Please note that under Scenario A, the employer rates will increase by 1.12% of the General member payroll and by 0.20% of the Safety member payroll.

Scenario B shows the *total* costs for the 2.5% benefit formulas. A total increase in the contribution rate equal to 8.80% of General and 9.62% of Safety payroll is needed to support these benefits.

Section 31627 Supplemental Benefits

If the County adopts Section 31676.14 for the General members, then the difference between the rates shown in Scenarios A and B, or 7.68% for General and 9.42% for Safety members should be contributed towards Section 31627 for the supplemental benefits. The UAAL portion of these rates is 6.07% for General and 7.20% for Safety, and is being paid off over a 12-year period from June 30, 1998. The normal, or future cost rates are 1.61% for General and 2.22% for Safety members.

UAAL

The increase in unfunded actuarial accrued liability (UAAL) of the alternate service retirement benefits is as follows:

ADDITIONAL UNFUNDED ACTUARIAL ACCRUED LIABILITY

GASB 25

The effect on the GASB 25 ratios of the alternate service retirement benefits is as follows:

GASB 25 RATIO	
	FUNDED RATIO
Current Plan	106.4%
Scenario A	105.5%
Scenario B	97.0%

Scenario A: Section 31676.14 for General members.

SCHEDULE 4

PROBABILITIES OF SEPARATION FROM ACTIVE SERVICE

The following pages indicate the probability of separation from active service for each of eight separate sources of termination:

- *Withdrawal:* member terminates and elects refund of member contributions.
- *Vested termination:* member terminates and contributions are left on deposit.
- *Ordinary death:* member dies prior to eligibility for retirement; death not employment-related.
- *Ordinary disability:* member receives disability retirement; disability not employment-related.
- *Service retirement:* member retires after satisfaction of requirements of age and/or service for reasons other than disability.
- *Duty disability:* member receives disability retirement; disability is employment-related.
- *Duty death:* member dies prior to retirement; death is employment-related.
- *Death while eligible:* member dies prior to retirement but after satisfaction of age and/or service requirements for service retirement or ordinary disability.

The probabilities shown for each cause of termination represent the probability that a given member will terminate at a particular age for the indicated reason. For example, if the probability of withdrawal at age 25 is .1550, then we are assuming that 15.50% of the active members at age 25 will terminate without vested rights during the next year.
