OVERVIEW

The County of Fresno is requesting proposals from qualified vendors to provide support for our existing Laserfiche Document Management and Workflow system and conversion of existing FileNet IS systems into Laserfiche. This system must provide the departments of Auditor-Controller/Treasurer-Tax Collector, Assessor/Recorder, Public Works, Social Services, Sheriff, Public Health and Probation with the capability of imaging paper and electronic documents as well as photo images and video files. The data would be stored on electronic media providing accessibility via the County network or the Internet to County employees or the public at large. The County may require additional licenses for conversion of data from an existing FileNet Document Management Solution to the Laserfiche Document Management System that is currently in place.

The County of Fresno has been using the Laserfiche Document Management System since 2005 for the departments of the Auditor-Controller/Treasurer-Tax Collector, Assessor/Recorder, Public Works, Social Services and Sheriff. The departments of Public Health and Probation use FileNet for some of their document management needs but would like quotes to review Laserfiche as another option. Conversion to Laserfiche would require re-engineering of existing third party and County developed applications that interface with their current document management system.

In most departments only a small number of staff will be performing scanning, indexing, and editing of documents, while the majority of the staff will require the ability to search, view, print, e-mail and attach notations to the documents. Most documents consist of text with some graphics. Graphics may include but are not limited to photographs, charts, signatures and artwork. Some of these graphics may be used as a border on the documents. Documents may require full-text indexing.

SCOPE OF WORK

The County of Fresno is requesting proposals from qualified vendors to provide the following:

- 1) A non-exclusive contract to provide maintenance of the existing Laserfiche environment.
- 2) Planning and maintenance of new Laserfiche environments converted from FileNet for Probation and/or Public Health. The solutions must be designed to meet all current Security and Privacy regulations surrounding Protected Health Information (PHI), Electronic Health Records, and Personally Identifiable Information (PII) such as HIPAA and HITECH.

The existing County Laserfiche system operates across multiple data repositories. Collectively, Laserfiche hosts approximately 40 million documents at nearly 2 Terabytes of storage. The County is currently operating Laserfiche version 9 on the application server and workstations. We are currently utilizing the Rio licensing model with 219 named full, 92 named read only permissions + Quickfields and the Forms Combo for Quick Fields as well as Laserfiche Workflow.

There are eight (8) Microsoft SQL databases that are in a production environment at this time. Currently there are five (5) departments that are using Laserfiche and each of those departments have their own individual MS SQL database repository. Each also has their own auditing database. Currently the Assessor and the Auditor/Controller-Treasurer/Tax Collector utilize the Laserfiche Workflow application.

The vendor must meet each of the following objectives:

- 1) The vendor must provide guidance at time of conversion, focusing on identifying the folder structure, naming conventions, template field scheme, indexing and column structure while planning for eventual expansion, disaster recovery and future integration with other applications.
- 2) The vendor is required to install all licensed Laserfiche software at mutually agreed upon times on the County servers.
- 3) The vendor is required to implement user/group security and auditing when requested.
- 4) The vendor must assist with setup of document retention schedules that comply with Federal, State and local statutes. These retention schedules are typically from five (5) to ten (10) years, but may vary. The County will provide the retention schedules.
- 5) The vendor must provide training for all County Laserfiche users, including documentation and training materials, in electronic format only. Along with training material, the vendor will also be responsible for any licensing or software costs associated with training.
- 6) The vendor must be able to aid in the development of Laserfiche workflows.
- 7) Provide for the capability to retrieve documents via a web browser or other third party application external to the County network. This is currently being done with the County Sheriff department and will also be needed by Probation and Public Health.
- 8) All metadata (Metadata is any additional information, besides images, text, and electronic files, that can be associated with a document, such as fields, tags, links and versions) must be indexed based on a customized criteria.
- 9) Nearly all documents require full-text indexing. Many documents will contain photographs or patterned images. Any OCR process run against these documents must be able to adequately handle, and when necessary, disregard these images.

- 10) Maintain the existing Laserfiche functionality of attaching an image to an email through Microsoft Exchange.
- 11) PII and PHI regulations dictate many of the internal procedures used by the County. Any newly installed versions of Laserfiche must meet all HIPAA standards and provide for adequate audit trails, including, but not limited to a record creator's name and date/time stamps on all additions, changes, deletes, and reads.
- 12) The vendor may be called upon to make recommendations based on demonstrable experience for additions or changes to structure, workflow or third party integration.
- 13) Various departments, primarily law enforcement, have 24/7 operations, therefore after hours or emergency support must be available, preferably by multiple support technicians. After hours support is defined by support that occurs after 5:00PM Pacific Time to 8:00 AM Pacific Time, and including weekends.
- 14) Fully describe how you would attain each of the objectives identified above. Please address each item in 1-12 above.

FileNet Conversion:

Images and metadata from the existing FileNet repository must be converted to a new Laserfiche repository and must replicate, the existing FileNet folder structure and security and permission levels. This conversion is intended for the departments of Public Health and Probation. The following are requirements needed to complete the conversion successfully:

Public Health has approximately 2,000,000 documents which consist of approximately 4,000,000 pages.

- 1) Fully describe the process of converting the existing FileNet documents to the Laserfiche system. Please provide a detailed per-page or per-document cost breakdown. Please include any volume pricing if available.

Public Health Requirements:**Overview:**

Currently, the Department of Public Health (DPH) uses FileNet to store a wide variety of documents including facility health inspection reports for food safety, architectural drafts, meeting agendas and policies and client charts. Some of these images are able to be viewed from the Internet while others are downloaded to a FTP server or to a CD for transfer to outside agencies. DPH currently uses 16 FileNet licenses for scanning, 8 for redaction, and 30 concurrent licenses for viewing.

The following is a list of key features that would be needed to successfully transition Public Health from FileNet to Laserfiche:

- 1) Replace ImageSoft ID Shield software as the main redaction tool for the Health Inspection Network (a website that lists the most recent routine food inspections for facilities). The replacement redaction tool must have the capability to redact a copy of the original document and make that copy available to the public via the Internet. The original, un-redacted copy must be kept available to select staff in DPH.
- 2) The ability to directly link to Laserfiche document images from the County's Public Health Inspection Network, and present those images to the Internet.
- 3) The system must have the ability to provide a monthly extract of the metadata from the Public Health Inspection Network as a flat file.

- 4) The replacement system must incorporate the ability to burn data and images directly to CD/DVD, packaged with the native viewer that allows searching and viewing of the contents.
- 5) Public Health currently possesses a large number of SCSI connected scanners, primarily Fujitsu and HP to process FileNet images. The replacement Laserfiche system must include interoperability with these existing scanners. Public Health currently uses a firewire connected Ideal Context Crystal Scanner, model number 6700D006 to provide large scale scanning of architectural drafts of approximately 100Mb in size and up to 400dpi. The proposal must support this scanner or provide for a replacement that meets or exceeds these specifications.
- 6) The replacement document management system must have the ability to incorporate document and page separators, and provide the ability to index individual pages.
- 7) The seamless integration of scanning a document, cleaning up a document and indexing of documents is a must.
- 8) Each individual document image and its corresponding metadata must be separated with different levels of security based on document class. For example, each division within Public Health cannot see the other's lab reports, however some Environmental Health staff can view other division's documents. Depending on the division, seven (7) and ten (10) year file retentions will be required.
- 9) Security settings and audit trails must be HIPPA compliant.

Probation Requirements:

Overview:

Currently Probation has in-house developed applications called JAS (Juvenile Automation System) and APS (Adult Probation System). The systems provide case management and institution management for the Juvenile and Adult divisions of the Probation department. The JAS/APS applications provide the ability to view documents contained in FileNet and present the associated metadata and other related information from multiple sources.

The capability to permanently scanned court orders and other law enforcement forms and provide the ability for quick retrieval in remote and urban areas is an essential tool when executing warrants or when investigating a case.

Records will typically be scanned using a series of batch numbers. A zone OCR process recognizes key fields in pre-assigned locations which in turn identifies the form. A successful proposal will include this feature. Probation currently uses 30 licenses for scanning, 10 for redaction, and 25 concurrent licenses for viewing.

Within the Probation repository, there are approximately 2,198,362 documents and images approaching 182GB of storage, with the number of documents scanned in excess of 160,000 per year.

The following is a list of key features that would be needed to successfully transition Probation from FileNet to Laserfiche:

- 1) Convert existing TIFFs to searchable PDFs.
- 2) Automatically Identify specific types of documents during the OCR process and in turn store the document in the correct directory with the proper security.
- 3) OCR specific regions, based on the corresponding document type, and store that data in index fields.
- 4) Capture the data of the various property values in a Microsoft Word document, such as creation date, version number and author. These fields have been customized to include name, DOB, Probation ID and store the property information as metadata.
- 5) Fully describe how you would attain each of the objectives identified above. Please address each item in 1-4 above.

COMPANY STRUCTURE

The vendor must have organization and management structure adequate and appropriate for overseeing and supporting the proposed services, and must provide sufficient management, customer service, and technical support staffing levels to sustain the support of the system.

- 1) Describe, in detail, your organization's company structure.
- 2) How many project managers, customer service, and/or technical support staff would be assigned and available to assist and support Laserfiche, initially through implementation, and ongoing for maintenance?
- 3) How many clients do you have? How long have you provided support for these clients in a production mode?
- 4) Fully describe your experience with FileNet to Laserfiche conversions. Describe the number and complexity of those conversions.
- 5) Provide resumes of projected staff involved with the FileNet conversion showing their experience with such tasks.

PROPOSAL CONTENT REQUIREMENTS

It is important that the vendor submit his/her proposal in accordance with the format and instructions provided under this section. Doing so will facilitate the evaluation of the proposal. It will limit the possibility of a poor rating due to the omission or mis-categorization of the requested information. Responding in the requested format will enhance the evaluation team's item by item comparison of each proposal item. The vendor's proposal may be placed at a disadvantage if submitted in a format other than that identified below.

Each binder is to be clearly marked on the cover with the proposal name, number, closing date, "Original" or "Copy", and bidder's name.
